Frontend Engineer with a background in astrophysics and 5+ years of experience building production web interfaces. Strong foundation in JavaScript, React, and TypeScript, with experience integrating APIs and collaborating closely with design and backend teams. Quick learner, comfortable working in ambiguity, and a keen eye for design, allowing for end-to-end frontend ownership. Interested in building interfaces that make complex systems and data more accessible to users.

Experience

Studio Simpatico — <https://studiosimpatico.com/>

New York City, NY (Remote)

Frontend Engineer

2021 — 2026

Marketing agency specialized in branding & website design, working with clients in the FinTech, Health, and Non-profit industries.

- Owned frontend development across multiple applications using React and TypeScript, delivering features end-to-end from concept to production in fast-paced environments
- Built and maintained reusable component systems, reducing development time by 25%+ and enabling consistent UI patterns across projects
- Improved application performance and accessibility, consistently achieving Lighthouse scores of 90+ across key metrics
- Integrated REST APIs and third-party services, managing complex data flows between backend systems and frontend interfaces
- Collaborated cross-functionally with designers to deliver responsive, user-focused features from concept to production

Projects

Satellite Tracker — <https://www.tlescope.com/>

- Built a full-stack satellite tracking app with a searchable ~10,000-satellite catalog from Celestrak, ground station pass prediction, and a live 3D orbit visualization via CesiumJS
- Architected the frontend and backend to handle complex states and data transformations locally to minimize API overhead and improving user latency
- Implemented robust state management via Zustand to synchronize live orbital data with the interactive UI, allowing for seamless searching and filtering of the satellite catalog
- Tech stack: React + TypeScript, Vite, Zustand, Leaflet, CesiumJS, PostgreSQL, Python, Numpy, AstroPy, Pytest, FastAPI, Docker

Skills

Frontend: React + TypeScript, Zustand, JavaScript, jQuery, HTML, CSS/SCSS, Responsive design systems, Performance optimization

Backend: PHP, JSON, API integrations, REST APIs

Tools: Git, Figma, Vite, Linear, Slack

Education

California State University, Northridge

Los Angeles, CA

Bachelors of Science in Astrophysics
